

ColorWorkDesk – SHOP LP

FORMULATION AND CORRECTION SOFTWARE

“ColorWorkDesk SHOP LP”

The software shows all the functions for formulating, correcting and storing data in a single screen.

The Navigator can manage standards and batches in a user-defined folder and subfolder structure for quick and easy tracking of information.

There are formulation models for opaque and semi-opaque products created by the mother system

ColorWorkDesk LAB M Top.

Active displays allow you to change data directly where it is displayed and you can save your work at every stage of the process.

The evaluation of the various formulas can be customized according to the customer's needs.

The correction manages the addition and reformulation of quantities and is accurate and versatile, with the opportunity to request the system to introduce a colorant foreign to the formula, to improve the DE in extremely critical situations.

The grids showing the values of the differences between the standard and the sample allow quick quality control.

The program is equipped with graphs for formula evaluation and printouts.

FUNCTIONS AVAILABLE IN THE VERSION:

1. Quick archiving of color charts in the database.
2. Color formulation in full coverage and semi coverage (Pigment Saving on a neutral base).
3. Color formulation also with search and search & correct technology
4. Automatic, semi-automatic and manual correction of the formula.
5. Dosage of the formula with the creation of the output file to interface with any dispenser.
6. Archiving of formulas in progress and final.
