

CWD FORMULA COLLECTION SC

BOOK OF FORMULAE
WITH SEARCH&CORRECT

URAI®

CWD - FORMULA COLLECTION SC

CWD – Formula Collection SC is the ideal software for paint shops and retailers, offering advanced control over formulas and color charts. It provides complete access to technical and safety documentation, including safety labeling. It has a fully customizable interface and is integrated with leading brands of automatic color mixing machines and label printers.

CWD – Formula Collection SC allows for flexible and advanced price management, with immediate discount and markup options. A small integrated management system also allows you to track the history of products sold, providing a comprehensive tool for monitoring store activity.

The “Search & Correct” function allows you to use a spectrophotometer to find the color in the database that most closely matches the one read by the instrument and provide the correction. This advanced feature allows you to reformulate a color starting from a preloaded formula. This function requires a preloaded colorant file and is ideal for those who want to create sample colors.

The software can be digitally licensed via CWD Server Formula Collection or operated standalone with a Sentinel dongle.

FUNCTIONS AVAILBLE IN THE VERSION:

1. Identify and correct the most similar color using a spectrophotometer with the “Search & Correct” function
2. Quickly and massively upload and edit formulas and color charts
3. Create customized price lists with discounts and markups for individual customers and product history
4. Compatible with automatic color mixing machines and label printers
5. Configure layouts, logos, and enable/disable specific features
6. Provides access to technical and security documentation
7. Ability to perform remote license upgrades
